

A homomorphism problem for flows

OPG-134

L1 - TRACTABLE

OPEN

Graph Theory

ORIGINAL PROBLEM STATEMENT

Conjecture Let M, M' be abelian groups and let $B \subseteq M$ and $B' \subseteq M'$ satisfy $B = -B$ and $B' = -B'$. If there is a homomorphism from $\text{Cayley}(M, B)$ to $\text{Cayley}(M', B')$, then every graph with a B -flow has a B' -flow.
