Number Theory

ORIGINAL PROBLEM STATEMENT

Problem (1) Find a counterexample to Baillie-PSW primality test or prove that there is no one.

Problem (2) Find a composite $n \equiv 3$ or $7 \pmod{10}$ which divides both $2^{n-1} - 1$ (see Fermat pseudoprime) and the Fibonacci number F_{n+1} (see Lucas pseudoprime), or prove that there is no such n .
