

Crossing sequences

OPG-1812

L1 - TRACTABLE

PARTIALLY SOLVED

Graph Theory

ORIGINAL PROBLEM STATEMENT

Conjecture Let $(a_0, a_1, a_2, \dots, 0)$ be a sequence of nonnegative integers which strictly decreases until 0.

Then there exists a graph that be drawn on a surface with orientable (nonorientable, resp.) genus i with a_i crossings, but not with less crossings.
