

Erdős Problem #102

EP-102

L1 - TRACTABLE

OPEN

Combinatorics

ORIGINAL PROBLEM STATEMENT

Let $c > 0$ and $h_c(n)$ be such that for any n points in $\mathbb{R}^2$ such that there are $\geq cn^2$ lines each containing more than three points, there must be some line containing $h_c(n)$ many points. Estimate $h_c(n)$. Is it true that, for fixed $c > 0$, we have $h_c(n) \rightarrow \infty$?
