

Erdős Problem #1088

EP-1088

L1 - TRACTABLE

PARTIALLY SOLVED

Combinatorics

ORIGINAL PROBLEM STATEMENT

Let $f_d(n)$ be the minimal m such that any set of m points in $\mathbb{R}^d$ contains a set of n points such that any two determined distances are distinct. Estimate $f_d(n)$. In particular, is it true that, for fixed $n \geq 3$, $f_d(n) = 2^{o(d)}$?
