

Erdős Problem #1111

EP-1111

L1 - TRACTABLE

PARTIALLY SOLVED

Graph Theory

ORIGINAL PROBLEM STATEMENT

If G is a finite graph and A, B are disjoint sets of vertices then we call A, B anticomplete if there are no edges between A and B .

If $t, c \geq 1$ then there exists $d \geq 1$ such that if $\chi(G) \geq d$ and $\omega(G) < t$ then there are anticomplete sets A, B with $\chi(A) \geq \chi(B) \geq c$.
