

Erdős Problem #174

EP-174

L1 - TRACTABLE

OPEN

Number Theory

ORIGINAL PROBLEM STATEMENT

A finite set $A \subset \mathbb{R}^n$ is called Ramsey if, for any $k \geq 1$, there exists some $d = d(A, k)$ such that in any k -colouring of $\mathbb{R}^d$ there exists a monochromatic copy of A . Characterise the Ramsey sets in $\mathbb{R}^n$.
