

Erdős Problem #218

EP-218

L1 - TRACTABLE

OPEN

Number Theory

ORIGINAL PROBLEM STATEMENT

Let $d_n = p_{n+1} - p_n$. The set of n such that $d_{n+1} \geq d_n$ has density $1/2$, and similarly for $d_{n+1} \leq d_n$. Furthermore, there are infinitely many n such that $d_{n+1} = d_n$.
