

Erdős Problem #276

EP-276

L1 - TRACTABLE

PARTIALLY SOLVED

Number Theory

ORIGINAL PROBLEM STATEMENT

Is there an infinite Lucas sequence $a_0, a_1, \dots$ where $a_{n+2} = a_{n+1} + a_n$ for $n \geq 0$ such that all a_k are composite, and yet no integer has a common factor with every term of the sequence?
