

Erdős Problem #278

EP-278

L1 - TRACTABLE

PARTIALLY SOLVED

Number Theory

ORIGINAL PROBLEM STATEMENT

Let $A = \{n_1 < \dots < n_r\}$ be a finite set of positive integers. What is the maximum density of integers covered by a suitable choice of congruences $a_i \pmod{n_i}$?

Is the minimum density achieved when all the a_i are equal?
