

Erdős Problem #390

EP-390

L1 - TRACTABLE

OPEN

Combinatorics

ORIGINAL PROBLEM STATEMENT

Let $f(n)$ be the minimal m such that $n! = a_1 \cdots a_k$ with $n < a_1 < \cdots < a_k = m$. Is there (and what is it) a constant c such that $f(n) - 2n \sim c \frac{n}{\log n}$?
