

Erdős Problem #414

EP-414

L1 - TRACTABLE

OPEN

Number Theory

ORIGINAL PROBLEM STATEMENT

Let $h_1(n) = h(n) = n + \tau(n)$ (where $\tau(n)$ counts the number of divisors of n) and $h_k(n) = h(h_{k-1}(n))$.
Is it true, for any m, n , there exist i and j such that $h_i(m) = h_j(n)$?
