

Erdős Problem #424

EP-424

L1 - TRACTABLE

OPEN

Number Theory

ORIGINAL PROBLEM STATEMENT

Let $a_1 = 2$ and $a_2 = 3$ and continue the sequence by appending to $a_1, \dots, a_n$ all possible values of $a_i a_j - 1$ with $i \leq j$. Is it true that the set of integers which eventually appear has positive density?
