L1 - TRACTABLE

OPEN

Number Theory

ORIGINAL PROBLEM STATEMENT

For any n let D_n be the set of sums of the shape $d_1, d_1 + d_2, d_1 + d_2 + d_3, \dots$ where $1 < d_1 < d_2 < \dots$ are the divisors of n .

What is the size of $D_n \setminus \cup_{m < n} D_m$?

If $f(N)$ is the minimal n such that $N \in D_n$ then is it true that $f(N) = o(N)$? Perhaps just for almost all N ?",
