

Erdős Problem #517

EP-517

L1 - TRACTABLE

PARTIALLY SOLVED

Combinatorics

ORIGINAL PROBLEM STATEMENT

Let $f(z) = \sum_{k=1}^{\infty} a_k z^{n_k}$ be an entire function (with $a_k \neq 0$ for all $k \geq 1$). Is it true that if $n_k/k \rightarrow \infty$ then $f(z)$ assumes every value infinitely often?
