

Erdős Problem #536

EP-536

L1 - TRACTABLE

OPEN

Combinatorics

ORIGINAL PROBLEM STATEMENT

Let $\epsilon > 0$ and N be sufficiently large. Is it true that if $A \subseteq \{1, \dots, N\}$ has size at least ϵN then there must be distinct $a, b, c \in A$ such that $[a, b] = [b, c] = [a, c]$, where $[a, b]$ denotes the least common multiple?
