

Erdős Problem #655

EP-655

L1 - TRACTABLE

PARTIALLY SOLVED

Geometry

ORIGINAL PROBLEM STATEMENT

Let $x_1, \dots, x_n \in \mathbb{R}^2$ be such that no circle whose centre is one of the x_i contains three other points. Are there at least $(1 + c)\frac{n}{2}$ distinct distances determined between the x_i , for some constant $c > 0$ and all n sufficiently large?
