

Erdős Problem #683

EP-683

L1 - TRACTABLE

OPEN

Number Theory

ORIGINAL PROBLEM STATEMENT

Is it true that for every $1 \leq k \leq n$ the largest prime divisor of $\binom{n}{k}$, say $P\left(\binom{n}{k}\right)$, satisfies $P\left(\binom{n}{k}\right) \geq \min(n - k + 1, k^{1+c})$ for some constant $c > 0$?
