

Erdős Problem #701

EP-701

L1 - TRACTABLE

PARTIALLY SOLVED

Graph Theory

ORIGINAL PROBLEM STATEMENT

Let $\mathcal{F}$ be a family of sets closed under taking subsets (i.e. if $B \subseteq A \in \mathcal{F}$ then $B \in \mathcal{F}$). There exists some element x such that whenever $\mathcal{F}' \subseteq \mathcal{F}$ is an intersecting subfamily we have $|\mathcal{F}'| \leq |\{A \in \mathcal{F} : x \in A\}|$.
