

Erdős Problem #859

EP-859

L1 - TRACTABLE

PARTIALLY SOLVED

Number Theory

ORIGINAL PROBLEM STATEMENT

Let $t \geq 1$ and let d_t be the density of the set of integers $n \in \mathbb{N}$ for which t can be represented as the sum of distinct divisors of n .

Do there exist constants $c_1, c_2 > 0$ such that $d_t \sim \frac{c_1}{(\log t)^{c_2}}$ as $t \rightarrow \infty$?
