

# Erdős Problem #864

EP-864

L1 - TRACTABLE

PARTIALLY SOLVED

Combinatorics

## ORIGINAL PROBLEM STATEMENT

Let  $A \subseteq \{1, \dots, N\}$  be a set such that there exists at most one  $n$  with more than one solution to  $n = a + b$  (with  $a \leq b \in A$ ). Estimate the maximal possible size of  $|A|$  - in particular, is it true that  $|A| \leq (1 + o(1)) \frac{2}{\sqrt{3}} N^{1/2}$ ?
