

Erdős Problem #870

EP-870

L1 - TRACTABLE

PARTIALLY SOLVED

Number Theory

ORIGINAL PROBLEM STATEMENT

Let $k \geq 3$ and A be an additive basis of order k . Does there exist a constant $c = c(k) > 0$ such that if $r(n) \geq c \log n$ for all large n then A must contain a minimal basis of order k ? (Here $r(n)$ counts the number of representations of n as the sum of at most k elements from A .)
