

Erdős Problem #878

EP-878

L1 - TRACTABLE

PARTIALLY SOLVED

Number Theory

ORIGINAL PROBLEM STATEMENT

If $n = \prod_{1 \leq i \leq t} p_i^{k_i}$ is the factorisation of n into distinct primes then let $f(n) = \sum p_i^{\ell_i}$, where ℓ_i is chosen such that $n \in [p_i^{\ell_i}, p_i^{\ell_i+1})$. Furthermore, let $F(n) = \max \sum_{i=1}^t a_i$ where the maximum is taken over all $a_1, \dots, a_t \leq n$ such that $(a_i, a_j) = 1$ for i
