

Erdős Problem #892

EP-892

L1 - TRACTABLE

PARTIALLY SOLVED

Number Theory

ORIGINAL PROBLEM STATEMENT

Is there a necessary and sufficient condition for a sequence of integers $b_1 < b_2 < \dots$ that ensures there exists a primitive sequence $a_1 < a_2 < \dots$ (i.e. no element divides another) with $a_n \ll b_n$ for all n ?

In particular, is this always possible if there are no non-trivial solutions to $(b_i, b_j) = b_k$?
