

Erdős Problem #931

EP-931

L1 - TRACTABLE

OPEN

Number Theory

ORIGINAL PROBLEM STATEMENT

Let $k_1 \geq k_2 \geq 3$. Are there only finitely many $n_2 \geq n_1 + k_1$ such that $\prod_{1 \leq i \leq k_1} (n_1 + i)$ and $\prod_{1 \leq j \leq k_2} (n_2 + j)$ have the same prime factors?
