

Erdős Problem #940

EP-940

L1 - TRACTABLE

PARTIALLY SOLVED

Number Theory

ORIGINAL PROBLEM STATEMENT

Let $r \geq 3$. A number n is r -powerful if for every prime p which divides n we have $p^r \mid n$.

Are there infinitely many integers which are not the sum of at most r many r -powerful numbers? Does the set of integers which are the sum of at most r r -powerful numbers have density 0?
