

Erdős Problem #953

EP-953

L1 - TRACTABLE

PARTIALLY SOLVED

Number Theory

ORIGINAL PROBLEM STATEMENT

Let $A \subset \{x \in \mathbb{R}^2 : |x| < r\}$ be a measurable set with no integer distances, that is, such that $|a - b| \notin \mathbb{Z}$ for any distinct $a, b \in A$. How large can the measure of A be?
