

Funcoidal products inside an inward reloid

OPG-37378

L1 - TRACTABLE

PARTIALLY SOLVED

Topology

ORIGINAL PROBLEM STATEMENT

Conjecture (solved) If $a \times^{\text{RLD}} b \subseteq (\text{RLD})_{\text{in}} f$ then $a \times^{\text{FCD}} b \subseteq f$ for every funcoid f and atomic f.o. a and b on the source and destination of f correspondingly.

A stronger conjecture:

Conjecture If $\mathcal{A} \times^{\text{RLD}} \mathcal{B} \subseteq (\text{RLD})_{\text{in}} f$ then $\mathcal{A} \times^{\text{FCD}} \mathcal{B} \subseteq f$ for every funcoid f and $\mathcal{A} \in \mathfrak{F}(\text{Src } f)$, $\mathcal{B} \in \mathfrak{F}(\text{Dst } f)$.
