

The three 4-flows conjecture

OPG-132

L1 - TRACTABLE

OPEN

Graph Theory

ORIGINAL PROBLEM STATEMENT

Conjecture For every graph G with no bridge, there exist three disjoint sets $A_1, A_2, A_3 \subseteq E(G)$ with $A_1 \cup A_2 \cup A_3 = E(G)$ so that $G \setminus A_i$ has a nowhere-zero 4-flow for $1 \leq i \leq 3$.
