

Upgrading a completary multifuncoid

OPG-37385

L1 - TRACTABLE

PARTIALLY SOLVED

Topology

ORIGINAL PROBLEM STATEMENT

Let $\mathfrak{U}$ be a set, $\mathfrak{F}$ be the set of filters on $\mathfrak{U}$ ordered reverse to set-theoretic inclusion, $\mathfrak{P}$ be the set of principal filters on $\mathfrak{U}$, let n be an index set. Consider the filtrator $(\mathfrak{F}^n; \mathfrak{P}^n)$.

Conjecture If f is a completary multifuncoid of the form $\mathfrak{P}^n$, then $E^* f$ is a completary multifuncoid of the form $\mathfrak{F}^n$.

See below for definition of all concepts and symbols used to in this conjecture.

Refer to this Web site for the theory which I now attempt to generalize.
