

Wall-Sun-Sun primes and Fibonacci divisibility

OPG-822

L1 - TRACTABLE

OPEN

Number Theory

ORIGINAL PROBLEM STATEMENT

Conjecture For any prime p , there exists a Fibonacci number divisible by p exactly once.

Equivalently:

Conjecture For any prime $p > 5$, p^2 does not divide $F_{p-\left(\frac{p}{5}\right)}$ where $\left(\frac{m}{n}\right)$ is the Legendre symbol.
