Énoncé original (anglais, reproduction mot pour mot)

Conjecture Let $p_1, p_2, p_3, \dots$ be a sequence of points in $\mathbb{R}^d$ with the property that for every $i \geq d+2$, the points $p_{i-1}, p_{i-2}, \dots, p_{i-d-1}$ are distinct, lie on a unique sphere, and further, p_i is the center of this sphere. If this sequence is periodic, must its period be $2d+4$?
