

Convex Equipartitions with Extreme Perimeter

OPG-60010	L1 - Tractable	Partiellement résolu	Geometry
-----------	----------------	----------------------	----------

Énoncé original (anglais, reproduction mot pour mot)

To divide a given 2D convex region C into a specified number n of convex pieces all of equal area (perimeters could be different) such that the total perimeter of pieces is (1) maximized (2) minimized.

Remark: It appears maximizing the total perimeter is the easier problem.
