

Counterexamples to the Baillie-PSW primality test

OPG-511	L1 - Tractable	Ouvert	Number Theory
---------	----------------	--------	---------------

Énoncé original (anglais, reproduction mot pour mot)

Problem (1) Find a counterexample to Baillie-PSW primality test or prove that there is no one.

Problem (2) Find a composite $n \equiv 3 \text{ or } 7 \pmod{10}$ which divides both $2^{n-1} - 1$ (see Fermat pseudoprime) and the Fibonacci number F_{n+1} (see Lucas pseudoprime), or prove that there is no such n .
