

Erdős Problem #1052

EP-1052	L1 - Tractable	Partiellement résolu	Number Theory
---------	----------------	----------------------	---------------

Énoncé original (anglais, reproduction mot pour mot)

A unitary divisor of n is $d \mid n$ such that $(d, n/d) = 1$. A number $n \geq 1$ is a unitary perfect number if it is the sum of its unitary divisors (aside from n itself).

Are there only finite many unitary perfect numbers?
