Énoncé original (anglais, reproduction mot pour mot)

Let S be the set of all $m \geq 1$ such that there exists a prime p of $m \equiv 1 \pmod{m}$ such that $m! + 1 \equiv 0 \pmod{p}$. Does $\lim \frac{\lvert S \cap [1,x] \rvert}{x}$ exist? What is it?

Similarly, if P is the set of all primes p such that there exists an m with p of $m \equiv 1 \pmod{m}$ such that $m! + 1 \equiv 0 \pmod{p}$, then does $\lim \frac{\lvert P \cap [1,x] \rvert}{\pi(x)}$ exist? What is it?
