

Erdős Problem #1075

EP-1075	L1 - Tractable	Partiellement résolu	Graph Theory
---------	----------------	----------------------	--------------

Énoncé original (anglais, reproduction mot pour mot)

Let $r \geq 3$. There exists $c_r > 0$ such that, for any $\epsilon > 0$, if n is sufficiently large, the following holds.

Any r -uniform hypergraph on n vertices with at least $(1+\epsilon)(n/r)^r$ many edges contains a subgraph on m vertices with at least $c_r m^r$ edges, where $m=m(n) \rightarrow \infty$ as $n \rightarrow \infty$.
