

Erdős Problem #1110

EP-1110	L1 - Tractable	Partiellement résolu	Number Theory
---------	----------------	----------------------	---------------

Énoncé original (anglais, reproduction mot pour mot)

Let $p > q \geq 2$ be two coprime integers. We call n representable if it is the sum of integers of the form $p^k q^l$, none of which divide each other.

If $\{p, q\}$

$\in \{2, 3\}$ then what can be said about the density of non-representable numbers? Are there infinitely many coprime non-representable numbers?
