Énoncé original (anglais, reproduction mot pour mot)

Let $1 \leq d_1 < d_2$ and $k \geq 3$. Does there exist an integer r such that if $B = \{b_1 < \dots\}$ is a lacunary sequence of positive integers with $b_{i+1} \geq r b_i$ then there exists a sequence of positive integers $A = \{a_1 < \dots\}$ such that $d_1 \leq a_{i+1} - a_i \leq d_2$ for all $i \geq 1$ and $(kA) \cap B = \emptyset$, where kA is the k -fold sumset?
