

Erdős Problem #117

EP-117	L1 - Tractable	Ouvert	Combinatorics
--------	----------------	--------	---------------

Énoncé original (anglais, reproduction mot pour mot)

Let $h(n)$ be minimal such that any group G with the property that any subset of $>n$ elements contains some x

eq y such that $xy=yx$ can be covered by at most $h(n)$ many Abelian subgroups.

Estimate $h(n)$ as well as possible.
