

Erdős Problem #12

EP-12	L1 - Tractable	Partiellement résolu	Number Theory
-------	----------------	----------------------	---------------

Énoncé original (anglais, reproduction mot pour mot)

Let A be an infinite set such that there are no distinct $a, b, c \in A$ such that $a \mid (b+c)$ and $b, c > a$. Is there such an A with $\liminf \frac{|A \cap \{1, \dots, N\}|}{N^{1/2}} > 0$? Does there exist some absolute constant $c > 0$ such that there are always infinitely many N with $|A \cap \{1, \dots, N\}| < N^{1-c}$? Is it true that $\sum_{n \in A} \frac{1}{n} < \infty$?
