

Erdős Problem #132

EP-132	L1 - Tractable	Ouvert	Graph Theory
--------	----------------	--------	--------------

Énoncé original (anglais, reproduction mot pour mot)

Let $A \subset \mathbb{R}^2$ be a set of n points. Must there be two distances which occur at least once but between at most n pairs of points? Must the number of such distances $\rightarrow \infty$ as $n \rightarrow \infty$?
