

Erdős Problem #14

EP-14	L1 - Tractable	Ouvert	Number Theory
-------	----------------	--------	---------------

Énoncé original (anglais, reproduction mot pour mot)

Let $A \subseteq \mathbb{N}$. Let $B \subseteq \mathbb{N}$ be the set of integers which are representable in exactly one way as the sum of two elements from A .

Is it true that for all $\epsilon > 0$ and large N $\left| \{1, \dots, N\} \cap B \right| \gg_{\epsilon} N^{1/2 - \epsilon}$? Is it possible that $\left| \{1, \dots, N\} \cap B \right| = o(N^{1/2})$?
