

Erdős Problem #151

EP-151	L1 - Tractable	Ouvert	Graph Theory
--------	----------------	--------	--------------

Énoncé original (anglais, reproduction mot pour mot)

For a graph G let $\tau(G)$ denote the minimal number of vertices that include at least one from each maximal clique of G on at least two vertices (sometimes called the clique transversal number).

Let $H(n)$ be maximal such that every triangle-free graph on n vertices contains an independent set on $H(n)$ vertices.

If G is a graph on n vertices then is $\tau(G) \leq n - H(n)$?
