

Erdős Problem #18

EP-18	L1 - Tractable	Ouvert	Number Theory
-------	----------------	--------	---------------

Énoncé original (anglais, reproduction mot pour mot)

We call m practical if every integer $n < m$ is the sum of distinct divisors of m . If m is practical then let $h(m)$ be such that $h(m)$ many divisors always suffice.

Are there infinitely many practical m such that $h(m) < (\log \log m)^{O(1)}$? Is it true that $h(n!) < n^{o(1)}$? Or perhaps even $h(n!) < (\log n)^{O(1)}$?
