

Erdős Problem #271

EP-271	L1 - Tractable	Partiellement résolu	Number Theory
--------	----------------	----------------------	---------------

Énoncé original (anglais, reproduction mot pour mot)

Let $A(n) = \{a_0 < a_1 < \dots\}$ be the sequence defined by $a_0 = 0$ and $a_1 = n$, and for $k \geq 1$ define a_{k+1} as the least positive integer such that there is no three-term arithmetic progression in $\{a_0, \dots, a_{k+1}\}$.

Can the a_k be explicitly determined? How fast do they grow?
