

Erdős Problem #359

EP-359	L1 - Tractable	Ouvert	Number Theory
--------	----------------	--------	---------------

Énoncé original (anglais, reproduction mot pour mot)

Let $a_1 < a_2 < \dots$ be an infinite sequence of integers such that $a_1 = n$ and a_{i+1} is the least integer which is not a sum of consecutive earlier a_j s. What can be said about the density of this sequence?

In particular, in the case $n=1$, can one prove that $a_k/k \rightarrow \infty$ and $a_k/k^{1+c} \rightarrow 0$ for any $c > 0$?
