

Erdős Problem #374

EP-374	L1 - Tractable	Ouvert	Number Theory
--------	----------------	--------	---------------

Énoncé original (anglais, reproduction mot pour mot)

For any $m \in \mathbb{N}$, let $F(m)$ be the minimal $k \geq 2$ (if it exists) such that there are $a_1 < \dots < a_k = m$ with $a_1! \dots a_k!$ a square. Let $D_k = \{m : F(m) = k\}$. What is the order of growth of $|D_k \cap \{1, \dots, n\}|$ for $3 \leq k \leq 6$? For example, is it true that $|D_6 \cap \{1, \dots, n\}| \gg n$?
