Let  $p(n)$  denote the least prime factor of  $n$ . There is a constant  $c > 0$  such that  $\sum_{\substack{n \leq x \\ n \text{ not prime}}} \frac{p(n)}{n} \sim c \frac{x^{1/2}}{(\log x)^2}$ . Is it true that there exists a constant  $C > 0$  such that  $\sum_{x \leq n \leq x+Cx^{1/2}} \frac{p(n)}{n} \gg 1$  for all large  $x$ ?
