

Erdős Problem #468

EP-468	L1 - Tractable	Ouvert	Number Theory
--------	----------------	--------	---------------

Énoncé original (anglais, reproduction mot pour mot)

For any n let D_n be the set of sums of the shape $d_1, d_1+d_2, d_1+d_2+d_3, \dots$ where $1 < d_1 < d_2 < \dots$ are the divisors of n .

What is the size of $D_n \setminus \cup_{m < n} D_m$?

If $f(N)$ is the minimal n such that $N \in D_n$ then is it true that $f(N) = o(N)$? Perhaps just for almost all N ?",
